[@g7_rg](https://twitter.com/g7_rg)

“We have meanwhile set up a process and there are also independent institutions monitoring which objectives of our G7 meetings we actually achieve. When it comes to these goals we have a compliance rate of about 80%, according to the University of Toronto. Germany, with its 87%, comes off pretty well. That means that next year too, under the Japanese G7 presidency, we are going to check where we stand in comparison to what we have discussed with each other now. So a lot of what we have resolved to do here together is something that we are going to have to work very hard at over the next few months. But I think that it has become apparent that we, as the G7, want to assume responsibility far beyond the prosperity in our own countries. That’s why today’s outreach meetings, that is the meetings with our guests, were also of great importance.”

Chancellor Angela Merkel, Schloss Elmau, 8 June 2015

G7 summits are a moment for people to judge whether aspirational intent is met by concrete commitments. The G7 Research Group provides a report card on the implementation of G7 and G20 commitments. It is a good moment for the public to interact with leaders and say, you took a leadership position on these issues — a year later, or three years later, what have you accomplished?

Achim Steiner, Administrator, United Nations Development Programme,
in G7 Canada: The 2018 Charlevoix Summit

Background

While coal has long been on the G7 agenda, the transition away from coal is a relatively recent commitment area first seen at the 1998 Birmingham Summit.²⁰⁶⁴ By adopting and implementing international treaties like the Kyoto Protocol of 2007 and the Paris Agreement of 2016, G7 leaders have been able to develop measures to reduce greenhouse gas emissions from the use, trade and generation of coal-power.²⁰⁶⁵ International instruments like the International Energy Agency (IEA) and Development Financial Institutions (DFIs) have also enabled the G7 members to support developing countries in transitioning to low-carbon economies.²⁰⁶⁶

At the 1979 Tokyo Summit, G7 members promised to “increase as far as possible coal use, production, and trade, without damage to the environment” amidst the ongoing oil crisis of 1979.²⁰⁶⁷ To avoid any future dependency on oil resources, G7 members pledged “not to interrupt coal trade under long term contracts unless required to do so by a national emergency.”

At the 1989 Paris Summit, G7 members recognised the scientific basis which argued that “excessive emissions of carbon dioxide and other greenhouse gases could lead to future climate changes.”²⁰⁶⁸ To advocate the need to limit emissions of greenhouse gases, G7 members supported the work of international institutions like the Intergovernmental Panel on Climate Change (IPCC) and the World Meteorological Organization.

At the 1998 Birmingham Summit, G8 members underscored their determination to combat climate change as “the greatest environmental threat to their future prosperity.”²⁰⁶⁹ Members welcomed the adoption and implementation of the 1997 Kyoto Protocol as it set forth legally binding targets to reduce greenhouse gas emissions, and encouraged the supplementation of domestic actions with international market-based mechanisms.

At the 1999 Köln Summit, G8 members committed to developing domestic measures to reduce greenhouse gas emissions under the United Nations Framework Convention on Climate Change.²⁰⁷⁰ While not explicitly mentioning coal, this commitment shows that emission reductions and limiting warming was on the agenda.

At the 2005 Gleneagles Summit, the G8 supported international efforts to make coal power generation more clean and efficient.²⁰⁷¹ In the Gleneagles Plan of Action: Climate Change, Clean Energy and Sustainable Development, G8 members agreed to assist the IEA by “disseminating information on energy efficiency of coal-fired power plants,” assessing which power plants had the lowest emissions and working with stakeholders “on projects to demonstrate the potential of advanced fossil fuel technologies.”²⁰⁷²

At the 2008 Hokkaido-Toyako Summit, G8 members committed to “establish an international initiative with the support of the IEA to develop roadmaps for innovative technologies including carbon capture and storage (CCS)” in pursuing the objective of a low-carbon society.²⁰⁷³ Specifically, members initiated 20 large-scale CCS demonstration projects globally by 2010. Moreover, the G8 advocated for the role of World Bank initiatives like the Climate Investment Funds (CIF) including the Clean Technology Fund and the Strategic Climate Fund in providing access to cleaner energy in developing countries. Members themselves “pledged approximately [USD6 billion] as an Official Development Assistance (ODA) contribution to the funds in support of low-carbon economies.”

At the 2009 L’Aquila Summit, G8 members explicitly recognised that the “increase in global average temperature above pre-industrial levels ought not to exceed 2°C” in reaffirmation of the importance of the IPCC’s 2007 Fourth Assessment Report.²⁰⁷⁴

At the 2016 Ise-Shima Summit, G7 members welcomed the 2016 Paris Agreement by committing “to limit the temperature increase to 1.5°C above pre-industrial levels.”²⁰⁷⁵ The purpose of this commitment was to reduce the impacts of climate change and stem rising rates of emissions.

At the 2018 Charlevoix Summit, G7 members welcomed “the adoption by the UN General Assembly of a resolution titled Towards a Global Pact for the Environment” as part of their commitment to reach a global carbon-neutral economy over the course of the second half of the century.²⁰⁷⁶

On 21 May 2021 in a virtual meeting, G7 Climate and Environment Ministers committed “to rapidly scale-up technologies and policies that further accelerate the transition away from unabated coal capacity and to an

<http://www.g7.utoronto.ca/summit/2018charlevoix/communiqu.html>

overwhelmingly decarbonised power system in the 2030s.”²⁰⁷⁷ The G7 Ministers highlighted the importance of working with different initiatives and institutions to achieve this objective like the Energy Transition Council (ETC), the Powering Past Coal Alliance, and the upcoming COP26 Glasgow Summit. The Ministers also discussed the role of “aligning official international financing with the global achievement of net zero GHG [greenhouse gas] emissions no later than 2050 and deep emissions reductions in the 2020s” to keep the goal of limiting the global temperature increase to 1.5°C within reach. G7 Ministers also appreciated the support provided and mobilised by DFIs and multilateral funds to support the energy transition. Finally, the Ministers approved the recent CIF’s board decision to launch new sector specific funds, including those to accelerate coal transitions, and support renewable energy deployment in emerging economies.

At the 2021 Cornwall Summit, G7 members planned “to commit up to [USD2 billion] in the coming year to its Accelerating the Coal Transition and Integrating Renewable Energy programs” in efforts to “mobilize up to [USD10 billion] in co-financing, including from the private sector, to support renewable energy deployment in developing and emerging economies.”²⁰⁷⁸ Encouraging domestic actions coordinated through the ETC, G7 members also called on other major economies to join them in “phasing out the most polluting energy sources, and scaling up investment in the technology and infrastructure to facilitate the clean, green transition.”

Commitment Features

At the 2021 Cornwall Summit, G7 leaders recognised that “continued global investment in unabated coal power generation is incompatible with keeping 1.5°C within reach.”²⁰⁷⁹ In response, they produced the following commitment under the Carbis Bay G7 Summit Communiqué: “[To accelerate the international transition away from coal, recognising that continued global investment in unabated coal power generation is incompatible with keeping 1.5°C within reach we stress that international investments in unabated coal must stop now and] we commit now to an end to new direct government support for unabated international thermal coal power generation by the end of 2021, including through Official Development Assistance, export finance, investment, and financial and trade promotion support.”

To define the key terms in this commitment, “direct government support” refers to “a grant or loan by a government to a private person or company to assist an enterprise deemed advantageous to the public.”²⁰⁸⁰ “New” is defined as “having recently come into existence.”²⁰⁸¹ In the context of direct government support, “new” is understood to mean any recently created loan, grant, or subsidy.

“Unabated coal power generation” is defined as “the use of coal that [is not] mitigated with technologies to reduce the CO₂ [carbon dioxide] emissions, such as Carbon Capture Utilisation and Storage (CCUS).”²⁰⁸² International is defined as “of, relating to, or affecting two or more nations.”²⁰⁸³ Thus, the term “unabated international thermal coal power generation” is understood to mean the use of coal by two or more nations that is not mitigated with technologies to reduce emissions.

²⁰⁸³ International, Merriam-Webster Dictionary (Springfield) n.d. Access Date: 26 September 2021. <https://www.merriam-webster.com/dictionary/international>

The term “1.5° Celsius” refers to the latest limit placed on global warming by the Paris Agreement, “a legally binding international treaty on climate change that entered into force on 4 November 2016.”²⁰⁸⁴ The goal of the treaty was to limit global increases in temperature to 1.5° Celsius by curbing greenhouse gas emissions as soon as possible.

G7 members agreed to bring an end to any new direct government support for unabated international thermal coal power generation through four pillars of cooperation: Official Development Assistance, export finance, investment or financial and trade promotion support. ODA refers to “government aid designed to promote the economic development and welfare of developing countries i.e., grants, ‘soft’ loans and the provision of technical assistance.”²⁰⁸⁵ ODA “may be provided bilaterally, from donor to recipient, or channelled through a multilateral development agency such as the United Nations or the World Bank.” A member can receive compliance for this aspect of the commitment by providing government aid to the ODA through loans, assistance, or sharing information to aid in the implementation of clean and sustainable energy.

The term “export finance” is defined as “a cash flow solution for exporters which facilitates the commerce of goods internationally.”²⁰⁸⁶ It is a range of finance that “aims to support businesses reaching the international market.” The purpose of export finance is to fund the production of products that are to be sold internationally prior to payment from the purchaser. A member can receive compliance for this aspect of the commitment by providing funding to a company or manufacturer that produces alternative energies to coal in order to facilitate its usage internationally.

The term “investment” refers to the act of allocating funds into something to achieve a result.²⁰⁸⁷ In the context of this commitment, export finance and investments refer to funding allocated for initiatives that seek to develop or utilize alternative energy sources other than unabated coal production in order to achieve the goal of limiting emissions to maintain a 1.5°C warming range. Examples of investments that count towards compliance for this aspect of the commitment include funding for research and development of sustainable energies or funding for companies that produce sustainable energies.

“Financial support” is defined as money that is usually provided by the government to enable an organization to continue.²⁰⁸⁸ “Trade promotion” is defined as “a marketing technique directed at wholesalers or retailers rather than the final consumer, specifically aimed at increasing demand for products in retail stores.”²⁰⁸⁹ In the context of coal power generation, the term “trade promotion support” is understood as investing in the accessibility and profitability of clean and sustainable energy generation for industry workers.

Full compliance, or a score of +1, is awarded to G7 members who demonstrate strong action in ending any new direct government support for unabated international thermal coal power generation through at least two and a weaker action in at least one of the pillars of cooperation of the commitment. The four pillars, as stated before, include: Official Development Assistance, export finance, investment or, financial and trade promotion support. Strong actions include providing direct investment and funding into the ODA, manufacturers as export finance, research and development initiatives for clean energy technologies and initiatives that promote the sale and trade of sustainable energies. Weaker actions include reasserting the

²⁰⁸⁷ Investment, Cambridge Dictionary (Cambridge) n.d. Access Date: 26 September 2021. <https://dictionary.cambridge.org/dictionary/english/investment>

²⁰⁸⁸ Financial Support, Cambridge Dictionary (Cambridge) n.d. Access Date: 26 September 2021. <https://www.collinsdictionary.com/dictionary/english/financial-support>

²⁰⁸⁹ What is Trade Promotion, HCL Technologies (Noida) n.d. Access Date: 26 September 2021. <https://www.hcltech.com/technology-qa/what-trade-promotion>

commitment to end new government support for unabated thermal coal power generation by attending meetings, making public statements and attending summits but without taking any concrete action or issuing any funding for initiatives. In order to achieve full compliance, a member must at a minimum take strong action in two of the component criteria (for example, increasing funding for export finance and investments) and weaker action in at least one other area (for example, making a statement emphasizing the importance of the ODA in transitioning to sustainable energy.)

Partial compliance, or a score of 0, is awarded to G7 members who only take weak actions in three of the four pillars of cooperation. Examples of weak action, as previously stated, includes actions that are less substantial, like verbal reaffirmations of existing commitments, attendance at international conferences, etc. Partial compliance is also awarded when a state only takes strong action in one component criteria but fails to fulfill the two needed to achieve full compliance.

Non-compliance, or a score of -1, is awarded either to those members who do not demonstrate any action in ending any new direct government support for unabated international thermal coal power generation.

Scoring Guidelines

-1	The G7 member has taken NO action towards ending new direct government support for unabated international thermal coal power generation in any of the four pillars of cooperation (Official Development Assistance, export finance, investment and financial and trade promotion support).
0	The G7 member has taken WEAK action(s) towards ending new direct government support for unabated international thermal coal power generation through THREE of the following: 1) Official Development Assistance, 2) export finance, 3) investment or 4) financial and trade promotion support.
+1	The G7 member has taken STRONG action(s) towards ending new direct government support for unabated international thermal coal power generation through at least TWO and weaker action in at least ONE of the following: 1) Official Development Assistance, 2) export finance, 3) investment or 4) financial and trade promotion support.

*Compliance Director: Saarah Khan
Lead Analyst: Minabil Iftikhar*

Canada: +1

Canada has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021.

On 21 June 2021, Minister of Natural Resources Seamus O'Regan Jr. launched the Clean Fuels Fund along with a call for project proposals that would increase Canada's capacity to produce clean fuels.²⁰⁹⁰ Worth CAD1.5 billion, this fund supports the creation or expansion of new and existing clean fuel production facilities in order to help Canada transition away from fossil fuels like coal.

On 24 June 2021, Minister O'Regan and the United States Secretary of Energy Jennifer Granholm signed a Memorandum of Understanding (MOU) on energy cooperation.²⁰⁹¹ This MOU aims to increase bilateral cooperation on clean fuel research and sustainable and equitable energy transitions in pursuit of Canada's commitment to achieve net-zero emissions by 2050.

²⁰⁹⁰ Minister O'Regan Launches Call for Proposals Under \$1.5-Billion Clean Fuels Fund to Grow Clean Fuels Market Across Canada, Natural Resources Canada (Ottawa) 21 June 2021. Access Date: 3 December 2021. <https://www.canada.ca/en/natural-resources-canada/news/2021/06/minister-oregan-launches-call-for-proposals-under-15-billion-clean-fuels-fund-to-grow-clean-fuels-market-across-canada.html>

²⁰⁹¹ Canada Strengthens Energy Partnership with the United States, Natural Resources Canada (Ottawa) 24 June 2021. Access Date: 3 December 2021. <https://www.canada.ca/en/natural-resources-canada/news/2021/06/canada-strengthens-energy-partnership-with-the-united-states.html>

On 29 June 2021, Minister of Innovation, Science and Industry François-Philippe Champagne announced a CAD20 million investment in ELYSIS Limited Partnership to support its work to create the world's first carbon-free aluminum.²⁰⁹² This investment will improve Canada's reputation as a reliable and secure supplier of green aluminum. Furthermore, this domestic investment acts as a model to other aluminum-producing countries that still use coal for aluminum smelting.

On 8 July 2021, the Government of Canada announced funding for the creation of three new solar farms in the towns of Antigonish, Berwick and Mahone Bay in Nova Scotia.²⁰⁹³ These projects will increase Nova Scotia's use of renewable energy and diminish their reliance on coal-based energy.

On 12 July 2021, the Government of Canada announced a CAD1.8 million investment in the first net-zero energy community in Nova Scotia.²⁰⁹⁴ The funding will support the refurbishment of related energy and heating infrastructure in the community of Pine Tree Park Estates, Nova Scotia. Data from this community will be collected and analyzed to serve as a model for future net-zero communities in Atlantic Canada.

On 16 July 2021, Minister of Employment, Workforce Development and Disability Inclusion Carla Qualtrough earmarked an investment of CAD35 million for innovative clean tech projects led by the British Columbia Centre for Innovation and Clean Energy.²⁰⁹⁵ This investment aims to fund research on how clean fuels and renewable natural gas aim to meet Canada's goal of net-zero emissions by 2050.

On 20 July 2021, Minister O'Regan launched the Just Transition Engagement.²⁰⁹⁶ This program aims to collect feedback from Canadians on how the Government of Canada can ensure a just and equitable transition to a low-carbon future for workers and their communities.

On 30 July 2021, Deputy Prime Minister and Minister of Finance Chrystia Freeland, Minister of Labour Filomena Tassi and Minister Champagne announced an investment of CAD400 million in ArcelorMittal Dofasco G.P., which is Canada's largest producer of flat-rolled steel.²⁰⁹⁷ The goal of this investment is to help ArcelorMittal Dofasco phase out coal-fired steelmaking at its facilities in Hamilton, Ontario. This measure aims to reduce Canada's greenhouse gas emissions by up to 3 million tonnes every year till 2030.

On 4 August 2021, Parliamentary Secretary to the Minister of Fisheries, Oceans and the Canadian Coast Guard and to British Columbia's Minister of Economic Development and Official Languages Terry Beech

²⁰⁹² Investment to Help Canada's Aluminum Industry Eliminate its Carbon Footprint, Innovation, Science and Economic Development Canada (Alma) 29 June 2021. ²⁰⁹⁷ Government Investing in Hamilton's Steel Industry to Support Good Jobs and Significantly Reduce Emissions, Innovation, Science and Economic Development Canada (Hamilton) 6 August 2021. Access Date: 16 November 2021. <https://www.canada.ca/en/innovation-science-economic-development/news/2021/07/government-investing-in-hamiltons-steel-industry-to-support-good-jobs-and-significantly-reduce-emissions.html>

announced investments in ten small- and medium-sized enterprises in areas like clean technology.²⁰⁹⁸ This announcement includes a CAD4 million investment in Clir Renewables Inc. to help expand their operations and sales of a renewable energy software.

On 5 August 2021, Canada signed a memorandum of understanding (MOU) with Romania on nuclear energy collaboration.²⁰⁹⁹ This MOU aims to decarbonize electricity systems and strengthen bilateral cooperation on establishing new and refurbished nuclear reactors in Romania.

On 6 August 2021, Minister of Environment and Climate Change Jonathan Wilkinson rejected the Grassy Mountain Coal Project, preventing the extraction of 4.5 million tonnes of coal.²¹⁰⁰ This decision highlights Canada's commitment to ending further expansions of existing thermal coal mines and preventing the encroachment of Indigenous lands.

On 11 August 2021, Minister Champagne announced an investment of CAD19.1 million in six Canadian clean technology companies through Sustainable Development Technology Canada.²¹⁰¹ This action includes an investment in the development of Eavor-Loop, a technology which can generate heat and power with zero emissions.

On 11 August 2021, Minister of Small Business, Export Promotion and International Trade Mary Ng and British Columbia's Minister of Jobs, Economic Recovery and Innovation Ravi Kahlon announced a partnership to increase the development and testing of integrated markets for clean technologies in Canada by using British Columbia as a testing point.²¹⁰² The goal is to support greater domestic adoption of clean technologies and make Canadian clean technology companies more competitive in the international market.

On 12 August 2021, Minister O'Regan launched a new "capacity-building-stream" under the Smart Renewables and Electrification Pathways Program to invest in renewable energy technologies.²¹⁰³ This stream will enable communities to thrive in a low-carbon economy as it supports and invests in projects that build knowledge and skills related to renewable energy and grid modernization technologies.

²¹⁰³ Building Capacity to Accelerate Canada's Low-Carbon Future - Smart Renewables and Electrification Pathways Program, Natural Resources Canada (Ottawa) 12 August 2021. Access Date: 2 December 2021. <https://www.canada.ca/en/natural-resources-canada/news/2021/08/building-capacity-to-accelerate-canadas-low-carbon-future--smart-renewables-and-electrification-pathways-program.html>

On 13 August 2021, Minister Wilkinson and France's Minister for the Ecological Transition Barbara Pompili renewed the 2018 Canada-France partnership on climate and the environment.²¹⁰⁴ The goal is to work together on new initiatives to phase out coal, by working through the Powering Past Coal Alliance which Canada leads, and to ensure an equitable transition for workers and their communities.

On 22 October 2021, along with other countries and jurisdictions, Canada joined the Organisation for Economic Co-operation and Development (OECD)'s statement to end export credit support for unabated coal-fired power plants.²¹⁰⁵ Thus, signatories to this agreement will no longer finance new coal-fired power plants without operational carbon capture, utilization and storage (CCUS) facilities nor to existing coal-fired power plants unless they are used for retrofitting to install CCUS.

On 1 November 2021, Prime Minister Justin Trudeau announced plans to end thermal coal exports by no later than 2030 and to achieve net-zero emissions on electricity grids by phasing out coal-fired electricity by 2035.²¹⁰⁶ Prime Minister Trudeau also announced Canada's contribution of CAD1 billion for the Climate Investment Funds Accelerated Coal Transition Investment Program to aid developing countries transition from coal-fired electricity to clean power.²¹⁰⁷ Additionally, Canada will contribute CAD25 million to the Energy Sector Management Assistance Program to assist the implementation of clean energy alternatives.²¹⁰⁸

On 4 November 2021, along with a coalition of 190 countries and organizations, Canada signed the Global Coal to Clean Power Transition Statement at the 26th Conference of the Parties to the United Nations Framework Convention on Climate Change.²¹⁰⁹ This statement recognizes the need to transition away from unabated coal power generation and commits the signatories towards working together on actions such as cleantech research, financial support and ending new direct government support for unabated coal-fired power generation by the end of 2022.²¹¹⁰

On 9 November 2021, Minister of Northern Affairs, Minister responsible for Prairies Economic Development Canada and Minister responsible for the Canadian Northern Economic Development Agency Daniel Vandal announced an investment of CAD1.35 million for hydrogen fuel infrastructure, equipment and

technology.²¹¹¹ This investment is aimed at developing hydrogen as a cleaner burning fuel alternative to fossil fuels such as coal.

On 1 December 2021, Minister of Natural Resources Jonathan Wilkinson announced a call for proposals to support low-carbon fuels research, development and demonstration projects.²¹¹² The goal is to ease Canada's shift towards more sustainable and low-carbon market operations.

On 17 January 2022, Minister Vandal announced more than CAD13 million in funding for 11 projects in Saskatchewan.²¹¹³ These projects aim to assist communities that are affected by the transition from coal-fired power generation.

On 17 January 2022, Minister Vandal announced an investment of more than CAD5.6 million to support a just and fair transition away from the coal industry in Alberta.²¹¹⁴ This investment includes support for laid-off coal industry workers, alignment of land use and services and infrastructure for phasing-out coal-fired electricity in the region.

On 19 January 2022, Minister Vandal and Minister of Tourism and Associate Minister of Finance Randy Boissonnault announced investments of more than CAD3 million to support Alberta's growing clean technology sector.²¹¹⁵ More than CAD2.1 million of this investment will be used to create an Energy Transition Centre in downtown Calgary which aims to encourage collaborations between national energy companies and energy transition experts.

On 8 March 2022, Minister of International Development and Minister responsible for the Pacific Economic Development Agency of Canada Harjit Sajjan announced CAD67.5 million in funding for international climate action projects.²¹¹⁶ This funding includes an amount of CAD15 million for the Women-Led Coal Transition Mechanism which aims to cultivate the participation of women in the design of coal transition strategies.²¹¹⁷

Holland published the Clean Power Roadmap for Atlantic Canada Final Report.²¹¹⁸ This report aims to highlight how Atlantic Canada can help create a clean interconnected power grid across its provinces in order to replace coal-fired power generation.

On 23 March 2022, the Government of Canada issued its first 7.5-year green bond worth CAD5 billion.²¹¹⁹ The goal of this bond is to finance investment in green infrastructure and aid Canada's transition to a greener economy.

On 30 March 2022, Minister Wilkinson announced investments of over CAD12 million to seven Canadian clean technology organizations.²¹²⁰ One of the investments is an amount of CAD1.85 million in ArcelorMittal Dofasco G.P., which is Canada's largest producer of flat-rolled steel, for implementing the use of biocarbon in industrial steel making. On 30 July 2021, Deputy Prime Minister and Minister of Finance Chrystia Freeland, Minister of Labour Filomena Tassi and Minister Champagne had announced an investment of CAD400 million in ArcelorMittal Dofasco.²¹²¹ The goal of these investments is to help ArcelorMittal Dofasco phase out coal-fired steelmaking at its facilities in Hamilton, Ontario. This measure aims to reduce Canada's greenhouse gas emissions by up to 3 million tonnes every year till 2030.

On 1 April 2022, Minister of Veterans Affairs and Associate Minister of National Defence Lawrence MacAulay announced funding for five community infrastructure projects in Stratford, Prince Edward Island.²¹²² One of these projects includes the construction of a 100-kilowatt solar array which will help Stratford transition away from coal power.²¹²³

On 7 April 2022, the Government of Canada released its 2022 Budget which included key energy points such as a new tax credit for clean technology and CCUS investments, funding for a greener electricity mix within Canada and a proposal to ban expenditures related to coal exploration and development.²¹²⁴

On 11 April 2022, Minister Wilkinson and Nova Scotia Minister of Natural Resources and Renewables Tory Rushton announced the expansion of the mandate of the Canada-Nova Scotia offshore energy regime.²¹²⁵

Both governments have also committed to create a competitive offshore renewables sector in Nova Scotia.²¹²⁶

On 26 May 2022, Minister Wilkinson and Minister of Environment and Climate Change Steven Guilbeault attended the G7 Climate, Energy and Environment Ministers Meeting in Berlin to discuss energy security.²¹²⁷ The G7 ministers agreed to decarbonise power systems and they notably welcomed the Glasgow Climate Pact to work towards the eventual domestic phaseout of unabated coal power generation.²¹²⁸

On 31 May 2022, Minister Guilbeault hosted the sixth Ministerial on Climate Action (MoCA6) in Stockholm, Sweden.²¹²⁹ Held at the halfway point between COP26 and the upcoming COP27, the MoCA6 sought to encourage members to deliver on their increased greenhouse gas emissions targets (or Nationally Determined Contributions) as well as promote climate financing of developing countries.

On 2 June 2022, Canada signed a Memorandum of Understanding with India to cooperate to increase their reliance on renewable energy as a source of electricity.²¹³⁰ Minister Guilbeault remarked that India's dependence on coal was left off the agenda because of their challenges with poverty alleviation.

Canada has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021. Canada's strongest actions towards this commitment are its numerous investments in clean fuel technologies, renewable energy projects and research on thermal coal energy divestment. Additionally, Canada pursued actions on the domestic level with its pledge to shift electrical grids toward net-zero emissions and on the international level with the OECD agreement to ban future investments in coal power. Under the pillar of Official Development Assistance, Canada has pledged funds to ease the transition away from coal for developing countries. It has provided trade promotion support to the steel and aluminium industries by investing in their capacity to transition toward the use of renewable energy sources. Finally, Canada has continued bilateral and international cooperation to promote clean technologies and replace unabated coal power generation.

Thus, Canada receives a score of +1.

Analyst: Daryll Bien Concepcion

France: +1

France has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021.

On 14 July 2021, France introduced a national aid scheme to support the production of renewable energy.²¹³¹ Worth EUR30.5 billion, this scheme is approved by the European Commission as it will support the transition to environmentally sustainable energy sources.

On 20 July 2021, the Parliament passed a final version of the Climate and Resilience law to combat climate change and increase energy efficiency through a variety of bans, incentives and quotas that address areas like housing, means of transportations and food consumption.²¹³² This includes measures such as requiring airlines to compensate emissions for domestic flights by purchasing carbon credits from 2024 onwards, banning domestic flights if there is a train alternative of less than two and a half hours, restricting advertising for fossil fuel energies and banning the availability of badly insulated housing from 2025.

On 13 August 2021, Minister of the Ecological Transition Barbara Pompili and Canada's Minister of Environment and Climate Change Jonathan Wilkinson renewed the Canada-France Partnership on Climate and Environment.²¹³³ The new features of this Partnership include working through the Powering Past Coal Alliance (PPCA) and promoting a green recovery in the wake of the COVID-19 pandemic. The PPCA focuses mainly on phasing out the use of coal as a resource and addressing the social and economic impacts of this transition.

On 24 September 2021, France signed a pledge, along with six other countries, led by the United Nations to stop building new power plants.²¹³⁴ This No New Coal agreement focuses on phasing out the use of coal and ending the construction of new plants.

On 12 October 2021, President Emmanuel Macron unveiled the EUR30 billion plan known as "France 2030" which seeks to decarbonize key polluting industries and develop certain sectors for innovation.²¹³⁵ As part of the plan, President Macron announced investments up to EUR2 billion in green hydrogen technologies.²¹³⁶ President Macron also emphasized nuclear power as crucial to the clean energy investment plan with the allocation of EUR1 billion to developing small nuclear reactor technologies.²¹³⁷

On 13 October 2021, France's national majority-owned company Électricité de France proposed the construction of up to six nuclear reactors in Poland to mitigate the impact of the country's coal-based energy

sector.²¹³⁸ This development would help move Poland away from coal and develop its nuclear sector, thereby aiding the country's transition towards carbon neutrality.

On 27 October 2021, the Ministry for Europe and Foreign Affairs and the Ministry of the Economy, Finance and the Recovery led a joint initiative to include climate and environmental issues in development policies.²¹³⁹ The Organisation for Economic Co-operation and Development's (OECD) Development Assistance Committee agreed to exclude "any support for coal without abatement mechanisms" from the scope of possible assistance and to limit support for other fossil fuels.

On 2 November 2021, along with the European Union, Germany, the United Kingdom, and the United States, France announced a long-term partnership to support South Africa in its transition away from coal, and in the country's decarbonization efforts.²¹⁴⁰ Through the International Just Energy Transition Partnership, France will commit to a combined investment of USD8.5 billion.²¹⁴¹ President Macron stated that this partnership would "benefit from the long-standing cooperation between France and South Africa through the work of the Agence Française de Développement." The International Just Energy Transition Partnership "is expected to prevent up to 1-1.5 gigatons of emission over the next 20 years."

On 9 November 2021, President Macron vowed to build more nuclear reactors nationally in an effort to move away from coal dependency.²¹⁴² The goal of this measure is to develop more nuclear energy to "guarantee France's energy independence" and to reach the country's goal of carbon neutrality by 2050.

On 12 November 2021, Minister Pompili joined the agreement to end global financing of coal, oil and gas projects by the end of 2022 at the 26th Conference of the Parties to the United Nations Framework Convention on Climate Change (COP26).²¹⁴³ As part of this agreement, France will "continue to work on proposals to accelerate the improvement of the carbon balance of the energy mix of countries receiving export support." The declaration encompasses the elimination of both export finance and bilateral official development assistance and it encourages the deployment of clean power generation as well as technologies and policies that might facilitate this transition.²¹⁴⁴

On 1 December 2021, Minister Pompili attended the Pentalateral Energy Forum to discuss how to administer a resilient transition to clean energy.²¹⁴⁵ The goal of this action was to emphasize the importance of cooperation for the global energy transition on an international platform.

On 9 December 2021, President Macron announced his ecological objectives for France's EU Council presidency in the first half of 2022.²¹⁴⁶ President Macron stated that the climate transition would be closely linked to the goals for economic growth thereby favoring the overall decarbonization of France and the EU's economy. The goal of this measure is "to achieve a balance between climate ambition and social justice."

On 11 December 2021, France's Ambassador to India Emmanuel Lenain reaffirmed France's support to India in achieving their renewable energy goal by 2030.²¹⁴⁷ Ambassador Lenain stated that both countries share the common objective of increasing the use of renewable energy and that their continued cooperation would be beneficial in achieving both of their environmental goals.

On 14 December 2021, representatives of France and the US held the first meeting of the US-France bilateral clean energy partnership.²¹⁴⁸ This partnership is set up under the auspices of France's Ministry for the Ecological Transition and the Ministry for Europe and Foreign Affairs and the US Department of Energy and Department of State. The goal of this partnership is to coordinate energy policy, technology and innovation. This first meeting resulted in "broad exchanges on clean energy policy in both countries, including efforts to decrease energy consumption, reduce emissions and support the transition to a low-carbon economy."

On 10 February 2022, President Macron announced plans to build six new atomic reactors, representing the decarbonisation of the national energy sector.²¹⁴⁹ The project will have a starting cost of EUR50 billion for the six pressurized water reactors, "with an option to consider building up to eight more by 2050."²¹⁵⁰

On 17 February 2022, Minister Pompili and Minister for Higher Education, Research and Innovation Frédérique Vidal unveiled an initiative to support projects that accelerate the marketing of heat-treated biomass granules to replace coal use throughout the country.²¹⁵¹ The project aims to overcome technological impediments to innovative work in coal-reducing sectors.

²¹⁴⁵ Penta Countries Discuss Measures To Make The Clean Energy Transition Secure And Resilient, European Commission (Brussels) 2 December 2021. On 1 March 2022, the Ministry for Europe and Foreign Affairs reiterated France's commitment to reducing carbon emissions while also aiding vulnerable countries to speed up their adaptation.²¹⁵² President Macron "pledged to increase France's climate finance for developing countries to EUR6 billion a year from 2021 to 2025."

On 8 April 2022, France, along with other EU countries, implemented a new round of sanctions against Russia which included a ban on the import of coal.²¹⁵³

On 16 April 2022, President Macron pledged "to make France the 'first great nation' to stop using oil, coal and gas as energy sources."²¹⁵⁴ President Macron also pledged to task his future prime minister with "green planning" thereby putting forward a more ecologically focused agenda for his next five years in office.

On 26 May 2022, Minister for Energy Transition Agnès Pannier-Runacher attended the G7 Climate, Energy and Environment Ministers Meeting in Berlin to discuss energy security.²¹⁵⁵ The G7 ministers agreed to decarbonise power systems and they notably welcomed the Glasgow Climate Pact to work towards the eventual domestic phaseout of unabated coal power generation.²¹⁵⁶

France has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021. France has taken strong actions in all pillars of cooperation like providing financing for decarbonization partnerships, investing in clean energy technologies and using bilateral channels to pursue their goal of carbon neutrality by 2050. France has also worked with international organizations like the OECD and attended international conferences like the COP26 to reaffirm their commitment to mitigating the impact of the coal-based energy sector.

Thus, France receives a score of +1.

Analyst: Ana Djordjijevic

Germany: +1

Germany has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021.

On 13 June 2021, Federal Minister for Economic Affairs and Energy Peter Altmaier and Federal Minister of Education and Research Anja Karliczek signed a Declaration of Intent with Australia's Minister for Energy Angus Taylor to establish a German-Australian Hydrogen Accord.²¹⁵⁷ Under the Accord, Germany will contribute EUR50 million towards research to develop, improve and test hydrogen technologies. Germany will co-finance two important projects: the development of industrial-scale production of hydrogen in

²¹⁵⁷ Declaration of Intent Signed to Establish German-Australian Hydrogen Alliance, Federal Ministry for Economic Affairs and Energy (Berlin) 13 June 2021. Access Date: 5 December 2021. <https://www.bmwi.de/Redaktion/EN/Pressemitteilungen/2021/06/20210613-declaration-of-intent-signed-to-establish-german-australian-hydrogen-alliance.html>

Australia using German technology to replace coal production and an auction to export Australian hydrogen to Germany. The goal of this agreement is to invest in renewable energy production on a bilateral level.

On 14 June 2021, Minister Altmaier announced the establishment of the H2Global Foundation, which is an organization tasked with buying green hydrogen abroad and reselling it at annual auctions.²¹⁵⁸ Purchases through H2Global are made through long-term contracts, providing hydrogen producers with a secure basis to continue developing their operations. The Federal Ministry for Economic Affairs and Energy has allocated EUR900 million to support H2Global. These funds will be used to temporarily cover the difference between the purchase price of hydrogen derivatives and their domestic sale prices to incentivize the growth of the international hydrogen market. The goal of this organization is to create a niche in the global energy market for an ecologically sustainable alternative to coal: green hydrogen.

On 23 June 2021, Germany earmarked EUR8 billion towards the “immediate climate action programme” which will finance measures to further reduce greenhouse gas emissions in 2022.²¹⁵⁹ This investment includes a EUR50 million increase in funding towards the development of green hydrogen production from offshore wind energy production and a EUR15 million increase in funding towards H2Global.

On 14 September 2021, Germany joined the International Solar Alliance, which is an international organization led by India, to assist countries in developing solar energy capabilities and reducing their dependence on fossil fuels.²¹⁶⁰ Parliamentary State Secretary Norbert Barthle reaffirmed Germany’s commitment to closely cooperate with India in developing its solar sector to replace coal-based power generation through reduced-interest loans, technical advice and vocational training. This alliance has resulted in the support for the installation of 3.37 gigawatts of renewable energy in India and is an example of how G7 members can assist developing countries in making their energy production systems more sustainable.

On 24 September 2021, Germany signed a pledge, along with six other countries, led by the United Nations to stop building new power plants.²¹⁶¹ This No New Coal agreement focuses on phasing out the use of coal and ending the construction of new plants.

On 2 November 2021, Germany, along with the EU, France, the UK, and the US, announced a new partnership with South Africa, which is aimed at supporting the country’s energy transition and phase-out of coal-fired power generation at the 26th Conference of the Parties to the United Nations Framework Convention on Climate Change (COP26).²¹⁶² Federal Minister for the Environment, Nature Conservation and Nuclear Safety Svenja Schulze stated that Germany would be contributing nearly EUR700 million towards the partnership. These funds are directed towards investments in social infrastructure to ensure a “socially just” coal phase-out and in technological innovations such as green hydrogen.

²¹⁶¹ United Nations Launches Pledge to Stop Building New Coal Power Plants, Bloomberg (New York) 24 September 2021. Access Date: 5 December 2021. <https://www.bloomberg.com/news/articles/2021-09-24/these-countries-plan-to-stop-building-new-coal-power-plants>

²¹⁶² Germany Supports South Africa in Coal Phase-Out, Federal Ministry for Economic Cooperation and Development (Berlin/Glasgow) 2 November 2021. Access Date: 4 December 2021. <https://www.bmz.de/en/news/archive-press-releases/mueller-germany-supports-south-africa-in-coal-phase-out-98432>

On 23 November 2021, Germany committed to accelerating its plan to phase out coal from 2038 to 2030.²¹⁶³

On 28 February 2022, Vice Chancellor of Germany and Federal Minister for Economic Affairs and Climate Action Robert Habeck brought forward Germany's goals to achieve 100 per cent renewable power by 2035 from its previous deadline of 2040.²¹⁶⁴ New legislation aims to triple the annual additions of onshore wind and solar infrastructure and double the development of offshore wind capacity. These measures were announced to shift energy sources from Russian coal and gas imports.

On 2 March 2022, Minister Habeck stated that shutdowns of domestic coal-fired power plants scheduled for this year may have to be delayed as a part of efforts to develop strategic energy reserves and cut dependence on Russian energy imports.²¹⁶⁵

On 8 April 2022, Germany, along with other EU countries, implemented a new round of sanctions against Russia which included a ban on the import of coal.²¹⁶⁶

On 26 May 2022, Minister Habeck and Federal Environment Minister Steffi Lemke led discussions on energy security at the G7 Climate, Energy and Environment Ministers Meeting in Berlin.²¹⁶⁷ The G7 ministers agreed to decarbonise power systems and they notably welcomed the Glasgow Climate Pact to work towards the eventual domestic phaseout of unabated coal power generation.²¹⁶⁸

On 31 May 2022, Germany attended the sixth Ministerial on Climate Action (MoCA6) in Stockholm, Sweden.²¹⁶⁹ Held at the halfway point between COP26 and the upcoming COP27, the MoCA6 sought to encourage members to deliver on their increased greenhouse gas emissions targets (or Nationally Determined Contributions) as well as promote climate financing of developing countries.

Germany has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021. Germany has demonstrated strong action in supporting bilateral agreements to develop decarbonisation technologies with Australia and India, investing in the ongoing climate action programme at COP26 and employing export finance in the production of alternative energies like green hydrogen.

Thus, Germany receives a score of +1.

Italy: 0

Italy has partially complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021.

On 20 September 2021, Prime Minister Mario Draghi addressed the United Nations roundtable on climate action highlighting the importance of phasing out unabated coal internationally.²¹⁷⁰ Prime Minister Draghi affirmed Italy's determination to help the European Union achieve a 55 per cent reduction in carbon emissions by 2030. Prime Minister Draghi also discussed the importance of supporting developing countries with the transition away from coal and encouraging investment in the development of carbon capture and other clean energy technologies.

From 30 September 2021 to 2 October 2021, Italy hosted the Pre-Conference of the Parties meeting in Milan to prepare for the 26th United Nations Framework Convention on Climate Change (COP26).²¹⁷¹ Ministers and high-level representatives from around the world met to set expectations for the upcoming convention and discussed limiting subsidies for coal and fossil fuels.

On 31 October 2021, Italy co-hosted COP26 in partnership with the UK.²¹⁷² The agenda included accelerating the transition away from unabated coal and increasing investment in clean energy sources in order to achieve the goal of net zero emissions by 2025.

On 4 November 2021, Italy signed the Global Coal to Clean Power Transition Statement at COP26.²¹⁷³ The statement promises to rapidly develop technologies that will replace unabated coal, to stop issuing permits for unabated coal projects and to provide social, financial and technical support to communities and industries affected by the transition.

On 2 December 2021, the Ministry for Ecological Transition ordered Enel, Italy's main provider for electricity, to close its coal-fired plant at the Eugenio Montale power plant in La Spezia, Liguria.²¹⁷⁴ This is the third time the government has demanded that Enel close one of its coal-fired plants. These closures are a part of Enel's greater plan to phase out all use of fossil fuels in powering its electricity grids.

On 25 February 2022, Prime Minister Draghi proposed the short-term reopening of coal plants to decrease dependence on Russian fossil fuels.²¹⁷⁵ The government is also considering increasing gas imports from the US, Algeria, Tunisia, Libya and Azerbaijan and expediting approvals for new green energy sites.

On 28 February 2022, Foreign Minister Luigi Di Maio stated that he is seeking energy deals with other countries to bolster the national energy supply.²¹⁷⁶ Minister Di Maio also announced that he has already had successful talks with Algeria to supply Italy with more gas.

²¹⁷⁵ Italy Could Revive Coal Plants to Break Russia Energy Dependence, Bloomberg (New York) 25 February 2022. Access Date: 24 March 2022. <https://www.bloomberg.com/news/articles/2022-02-25/italy-could-revive-coal-plants-to-break-russia-energy-dependence>

²¹⁷⁶ Italy To Get More Gas From Algeria, Foreign Minister Says, Reuters (Milan) 28 February 2022. Access Date: 24 March 2022. <https://www.reuters.com/business/energy/italy-get-more-gas-algeria-foreign-minister-says-2022-02-28/>

On 8 April 2022, Italy, along with other EU countries, implemented a new round of sanctions against Russia which included a ban on the import of coal.²¹⁷⁷

On 2 May 2022, Italy announced a package of restrictive measures aimed at protecting people from surging energy costs caused by Russia's invasion of Ukraine.²¹⁷⁸ The package includes measures that aim to decrease Italy's dependence on Russian energy by mid-2024 by extending the life of four coal fired power plants for up to two more years and accelerating the introduction of more renewable energy sources.

On 26 May 2022, Italy attended the G7 Climate, Energy and Environment Ministers Meeting in Berlin to discuss energy security.²¹⁷⁹ The G7 ministers agreed to decarbonise power systems and they notably welcomed the Glasgow Climate Pact to work towards the eventual domestic phaseout of unabated coal power generation.²¹⁸⁰

On 31 May 2022, Italy attended the sixth Ministerial on Climate Action (MoCA6) in Stockholm, Sweden.²¹⁸¹ Held at the halfway point between COP26 and the upcoming COP27, the MoCA6 sought to encourage members to deliver on their increased greenhouse gas emissions targets (or Nationally Determined Contributions) as well as promote climate financing of developing countries.

Italy has partially complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021. While Italy has taken strong action on an international level to provide official development assistance towards clean energy production, it has taken weaker action domestically like promising to end financial and trade promotion support for the coal industry on a regional rather than national level. Moreover, Italy has even reopened some of its domestic coal plants and brokered new energy agreements with Algeria and Egypt to meet energy needs following its sanctions on Russian oil and gas.

Thus, Italy receives a score of 0.

infrastructures' overseas through Joint-Crediting Mechanism."²¹⁸² Minister of the Environment Shinjirō Koizumi stated that Japan wants to “express [its] intention to promote not coal-fired power but decarbonized infrastructure.” He added that the Ministry of the Environment wishes to support companies in taking such actions themselves.

On 18 June 2021, the Director of the Ministry of Economy, Trade and Industry's Coal Division Hiroshi Tsuchiya announced the implementation of stricter rules on support for exports of new coal power plants.²¹⁸³ The goal is to end unabated coal power by the end of 2021, however the rules make an exception for countries that lack viable alternatives to coal and require Japan's technology to build coal-fired stations.²¹⁸⁴

On 21 June 2021, Minister of Economy, Trade and Finance Hiroshi Kajiyama addressed energy ministers from the Association of Southeast Asian Nations (ASEAN) and discussed the Asia Energy Transition Initiative (AETI).²¹⁸⁵ The goal of the AETI is to enable innovation and investment in renewable energy and energy efficiency to promote alternatives to coal. Japan's project will provide USD10 billion to foster clean energy in ASEAN.²¹⁸⁶

On 29 June 2021, the Japan Bank for International Cooperation (JBIC) announced that it would extend support for “exports from coal power plants if they come with emissions-cutting steps such as carbon and storage and co-firing ammonia.”²¹⁸⁷ The goal of this measure is to promote innovation in technologies that minimize the damaging effects of coal-powered plants. JBIC's three-year business plan focuses on funding renewable energy and new mitigating techniques for the use of coal such as ammonia and hydrogen.

On 21 July 2021, the Ministry of Economy, Trade and Industry announced plans to decrease the use of coal and liquefied natural gas to reduce dependency on fossil fuels for energy generation.²¹⁸⁸ According to the policy draft, renewables should account for 36 to 38 per cent of power supply by 2030-2031 and the use of coal would be decreased from 26 per cent to 19 per cent.

On 26 July 2021, the Ministry of the Environment released a plan with specific targets for reducing greenhouse gas emissions by 2030.²¹⁸⁹ The Ministry of the Environment calculated the percentage of greenhouse gases that needed to be reduced. For example, the industry sector would have to cut emissions by 37 per cent, while the household sector would have to reduce emissions by 66 per cent.

On 31 August 2021, Japan and the United States reaffirmed their commitment to work to “end new direct government support for unabated international coal-fired power generation by the end of 2021.”²¹⁹⁰ They

stated that this renewal of their partnership was part of the broader goal of working towards net zero emissions with developing countries. Japan and the US also discussed cooperating on innovation in areas concerning renewable energy, energy efficiency, storage and industrial decarbonization and taking steps to meet the USD100 billion annual joint mobilization goal of aligning climate resilience development.

On 22 October 2021, Japan joined the Organisation for Economic Co-operation and Development's (OECD) agreement to end export credit support for unabated coal-fired power plants.²¹⁹¹ Along with Canada, the European Union, Korea, Turkey, the United Kingdom and the United States, Japan agreed to ban "officially supported export credits and tied aid for new coal-fired power plants without operational carbon capture, utilization and storage facilities" and "existing coal-fired power plants, unless the purpose of the equipment supplied is pollution or CO₂ [carbon dioxide] abatement." The goal of this OECD agreement is to end all export financing of coal.

On 22 October 2021, Prime Minister Fumio Kishida formally approved plans originally announced on 22 July 2021 to increase the use of renewable energy sources by 2030.²¹⁹² The policy emphasizes research on how hydrogen and ammonia energy can reduce emissions and accelerate the move towards nuclear power.

On 27 October 2021, officials from the Ministry of the Environment met virtually with representatives of ASEAN to reaffirm their cooperation in working towards decarbonization.²¹⁹³ The summit touched on the three core pillars of transparency, mitigation and adaptation which are at the heart of the Japan-ASEAN cooperative efforts on climate change.

On 2 November 2021, Prime Minister Kishida introduced new financial support to combat climate change at the 26th Conference of the Parties to the United Nations Framework Convention on Climate Change (COP26).²¹⁹⁴ He pledged USD10 billion "in climate finance for developing countries over the next five years, in addition to the already-pledged" USD60 billion. Prime Minister Kishida also stated that Japan would develop projects to transform fossil-fuel-fired thermal power into zero-emission thermal power through the AETI.²¹⁹⁵ Foreign Press Secretary Yoshida Tomoyuki stressed that "while Tokyo has agreed to end new financial support for new coal-fired power plants by the end of 2021, it will stick to using the fuel for power generation until it can be replaced with ammonia or hydrogen."²¹⁹⁶

On 4 November 2021, Prime Minister Kishida highlighted plans to promote climate technology in Asia at COP26.²¹⁹⁷ Specifically, he referred to the national strategy of burning coal combined with ammonia to reduce carbon dioxide emissions from coal-fired power plants. The goal was to share information about Japan's efforts in ending support for unabated coal capacities.

²¹⁹¹ Agreement Reached at OECD to End Export Credit Support for Unabated Coal-Fired Power Plants, Organisation for Economic Co-operation and Development (Paris) 22 October 2021. ²¹⁹⁷ Japan Pledges Support For Asia-Wide Decarbonization, The Diplomat (Washington D.C.) 6 November 2021. Access Date: 8 December 2021. <https://thediplomat.com/2021/11/japan-pledges-support-for-asia-wide-decarbonization/>

On 10 November 2021, the Ministry of the Environment and the US Office of Special Presidential Envoy for Climate announced the launch of the “Global Subnational Zero Carbon Promotion Initiative.”²¹⁹⁸ The goal of this initiative is to promote global decarbonization.

On 8 December 2021, the Japan International Cooperation Agency announced a partnership with four Japanese utility companies to accelerate decarbonization efforts in Indonesia.²¹⁹⁹ The goal of the project is to reduce Indonesia’s reliance on coal-fired energy sources and help the country achieve its goal of carbon neutrality by 2060.

On 15 December 2021, the Ministry of Economy, Trade and Industry and the US Department of State met for the second Japan-U.S. Clean Energy Partnership to discuss priorities in accelerating clean energy support in the Indo-Pacific region.²²⁰⁰ These priorities include “capacity building activities, advanced cooperation on Small Modular Reactor nuclear energy, quality infrastructure, global procurement, power grid development and critical mineral mining sector governance.”

On 7 January 2022, Japan announced subsidies worth JPY27.9 billion to promote cleaner energy by mixing hydrogen-derived ammonia with coal.²²⁰¹ JERA, Japan’s largest power generator, also stated its intention to develop ammonia technologies and provide aid in this governmental effort by investing another JPY17.3 billion.

On 10 January 2022, Minister of Economy, Trade and Industry Koichi Hagiuda signed a memorandum of understanding to support Indonesia’s introduction of innovative ammonia technologies to decarbonize power generation.²²⁰² This joint initiative strengthens cooperation between Japan and Indonesia on energy related issues particularly pertaining to reducing the use of coal without ammonia technology.

On 18 January 2022, Minister of the Environment Tsuyoshi Yamaguchi reasserted the country’s commitment to reducing the use of coal fired plants by 2030 and to minimize harmful emissions.²²⁰³ Minister Yamaguchi noted that Japan aims to increase support for the development of carbon capture, use and storage technologies in efforts to assist other countries in Asia.

On 17 February 2022, the Ministry of the Environment and the Institute for Global Environmental Strategies hosted an online International Conference for Implementing Article 6 of the Paris Agreement to promote internal trading to reduce greenhouse gas emissions.²²⁰⁴ The aim of the conference was to share governance climate action frameworks.

On 8 April 2022, Minister Hagiuda stated that Japan would ban imports of coal from Russia and look for alternate suppliers highlighting a key change in Japan's energy procurement policy.²²⁰⁵

On 11 April 2022, Prime Minister Kishida met with representatives from Ricoh, which is a Japanese multinational electronics firm, to approve a policy proposal drafted by the Japan Climate Leaders' Partnership (JCLP).²²⁰⁶ The JCLP is a coalition of Japanese companies committed to sustainable economic prosperity. The goal of the proposal was to pioneer a "new form of capitalism [that] will be rooted in the 1.5°C target."

On 15 April 2022, Prime Minister Kishida stated that Japan would increase its investment in liquefied natural gas as an alternative to investments in coal.²²⁰⁷

On 5 May 2022, Prime Minister Kishida announced a plan to cut dependence on Russian gas by employing idle domestic nuclear reactors.²²⁰⁸ The goal of this action is to stabilize Japan's energy policies which are highly dependent on Russian cooperation.

On 12 May 2022, Japan and the EU reaffirmed their principles in climate change mitigation and adaptation as part of the EU-Japan Economic Partnership Agreement and Strategic Partnership Agreement.²²⁰⁹ Specifically, they promised to continue cooperation in encouraging countries to align their targets with the Paris Agreement temperature goal of 1.5°C and to phase out unabated coal power.

On 23 May 2022, Japan and the US reiterated their cooperation towards ensuring no new direct government support for unabated international coal-fired power generation as part of the US-Japan Climate Partnership.²²¹⁰

On 26 May 2022, State Minister for Economy, Trade and Industry Hosoda Kenichi and State Minister of Environment Toshitaka Ooka attended the G7 Climate, Energy and Environment Ministers Meeting in Berlin to discuss energy security.²²¹¹ The G7 ministers agreed to decarbonise power systems and they notably welcomed the Glasgow Climate Pact to work towards the eventual domestic phaseout of unabated coal power generation.²²¹²

On 31 May 2022, Japan attended the sixth Ministerial on Climate Action (MoCA6) in Stockholm, Sweden.²²¹³ Held at the halfway point between COP26 and the upcoming COP27, the MoCA6 sought to encourage

members to deliver on their increased greenhouse gas emissions targets (or Nationally Determined Contributions) as well as promote climate financing of developing countries.

Japan has partially complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021. Most of the actions that Japan took were weak as they either kept reaffirming existing commitments or stating that they would not stop using coal power until viable alternatives were developed. Also, Japan promised to develop energy technologies that would mitigate the effects of coal energy and to share these climate solutions with other countries in Asia - however, this measure has not actually taken place yet. The few strong actions that Japan took were to use bilateral channels to help develop renewable energy capacities in Indonesia and promote decarbonization efforts with the US.

Thus, Japan receives a score of 0.

Analyst: Ana Djordjijevic

United Kingdom: +1

The United Kingdom has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021.

On 30 June 2021, Minister for Energy, Clean Growth and Climate Change Anne-Marie Trevelyan announced that from 1 October 2024 onwards the United Kingdom will no longer use coal to generate electricity.²²¹⁴ She also spoke at the Powering Past Coal Alliance (PPCA) Europe Roundtable on the importance of phasing out coal power.

On 30 June 2021, the Minister of State at the Cabinet Office and the President for the 26th Conference of the Parties to the United Nations Framework Convention on Climate Change (COP26) Alok Sharma urged countries to commit to phasing out coal power.²²¹⁵ He also encouraged nations to join the PPCA as it would play a vital role in accelerating the world's transition to decarbonized power systems.

On 14 July 2021, the UK announced GBP5 million for the South East Asia Energy Transition Programme, which will provide technical and financial resources for renewable energy infrastructure in Southeast Asia.²²¹⁶ The UK also announced GBP3.8 million of technical assistance through the World Bank's Energy Sector Management Assistance Programme to accelerate South Africa's clean energy transition.

On 6 August 2021, the UK launched a new research programme worth GBP5 million, "Climate Services for a Net Zero Resilient World," to inform future climate policy.²²¹⁷ The goal of this programme is to provide models for how the UK can develop bilateral decarbonisation strategies like transitioning away from coal.

On 9 August 2021, COP26 President Sharma called on countries to commit to ending the financing and use of coal for power generation and to end financing the use of coal globally.²²¹⁸ This action falls under the pillar of Official Development Assistance (ODA).

²²¹⁴ End To Coal Power Brought Forward to October 2024, Department for Business, Energy & Industrial Strategy (London) 30 June 2021. Access Date: 7 December 2021. <https://www.gov.uk/government/news/end-to-coal-power-brought-forward-to-october-2024>

On 11 August 2021, Prime Minister Boris Johnson and COP26 President Sharma called for greater global actions in keeping global warming to 1.5 degrees as a new United Nations report observed that the world was warming more than previously estimated.²²¹⁹ The goal of this action was to emphasise the global phasing out of coal power.

On 3 September 2021, COP26 President Sharma highlighted the importance of international collaboration in the world's transition to renewable energy and the phasing out of coal power at a summit in Taiyuan, China.²²²⁰

On 13 September 2021, Minister Trevelyan launched a new investment round of GBP265 million in the Contracts for Difference scheme, which is an initiative to encourage investments in low-carbon electricity.²²²¹ The goal of this scheme is to provide renewable energy project developers with protection from volatile wholesale energy prices.

On 16 September 2021, COP26 President Sharma called on nations to scale up clean power more quickly and “consign coal power to history.”²²²² He emphasized the importance of phasing out coal in order to meet the Paris Agreement targets and avoid the worst effects of climate change.

On 20 September 2021, Prime Minister Johnson called upon the world's richest countries to commit more to developing countries in their transition to net-zero economies.²²²³ He also announced an allocation of GBP550 million to support developing countries to meet net-zero emissions and end the domestic use of coal.

On 22 September 2021, the United Kingdom allocated GBP220 million to support green projects for domestic businesses under the Industrial Energy Transformation Fund.²²²⁴ This funding will enable energy-intensive industries like steelmaking to transition away from the use of coal in production and reduce carbon emissions.

On 22 September 2021, Prime Minister Johnson called on members of the United Nations General Assembly to invest in clean energy and phase out coal by 2030 for developed countries and 2040 for developing countries.²²²⁵ He asked developed countries to deliver on their commitment to providing at least USD100 billion per year in climate financing for developing countries.

On 24 September 2021, the UK co-launched the No New Coal Power Compact as part of the PPCA along with Denmark, France, Germany and Montenegro.²²²⁶ This Compact promises that any country willing to begin a process toward a more ambitious transition away from coal-fired power generation can rely on the PPCA, particularly the signatories of this compact, for support in financing, utility and grid transformation, and socially just transitions for affected workers and communities. The UK, along with six other countries, also signed onto the No New Coal agreement, initiated by the United Nations, to stop building new coal power plants.²²²⁷

On 28 September 2021, Business and Energy Secretary Kwasi Kwarteng and Minister for Investment Gerry Grimstone announced GBP130 million in government and private investment for the construction of facilities that will develop and build components for next generation wind turbines.²²²⁸ The goal of this investment is to increase the country's capacity for using domestic offshore wind.

On 1 October 2021, Minister for Science, Research and Innovation George Freeman released the Fusion Green Paper, which is a strategy outlining how the UK will legislate the safe and effective rollout of fusion energy.²²²⁹ The goal of this measure is to use fusion energy to supply the energy needs of the country as it phases out coal power generation.

On 6 October 2021, the UK announced support for 13 innovative low-carbon projects in South Africa through its Climate Finance Accelerator program.²²³⁰ This support will fund projects like Greenline Africa which will construct dynamic solar thermal concentrators as an alternative heat source and Wetility which is a company that enables clients to generate and store solar energy.

On 19 October 2021, the UK unveiled the "Net Zero Strategy," which is an economy-wide plan setting out how to reach net zero emissions by 2050.²²³¹ This plan includes supporting domestic businesses in the transition to clean energy and green technology and committing investments like GBP140 million for the Industrial and Hydrogen Revenue Support scheme to help start up hydrogen projects, GBP500 million for innovation projects in green technologies and GBP120 million for the development of nuclear projects through the Future Nuclear Enabling Fund.

On 22 October 2021, along with other members of the Organisation for Economic Co-operation and Development (OECD), the UK agreed to end export credit support for unabated coal-fired power plants.²²³² This agreement highlights how financial support will no longer be available to new coal-fired power plants which operate without carbon capture, utilization, and storage (CCUS) facilities and to existing coal-fired power plants unless they are used for retrofitting to install CCUS.

On 30 October 2021, Prime Minister Johnson and Secretary Kwarteng announced an investment of GBP160 million for the construction of large-scale offshore wind ports and factory infrastructure in Scotland and Wales.²²³³ The goal of this investment is to increase the domestic ability to mass-produce offshore wind farms.

On 1 November 2021, Prime Minister Johnson announced the creation of the Clean Green Initiative at COP26, which will scale up public and private investment in quality, sustainable infrastructure globally.²²³⁴ He also announced that the UK aid-backed Private Infrastructure Development Group will commit more than GBP210 million in new investments to support transformational green projects in developing countries. Such investments include solar power projects in Burkina Faso, Pakistan, Nepal and Chad. Furthermore, the UK will contribute GBP750 million to the World Bank's efforts for funding green energy in India. Supporting the Clean Green Initiative, the UK will allocate over GBP3 billion in climate financing for green growth in developing countries for the next five years.

On 2 November 2021, Prime Minister Johnson launched the "Breakthrough Agenda," which is an international plan to deliver clean and affordable technology worldwide by 2030.²²³⁵ This plan includes the Glasgow Breakthroughs, a set of goals aimed to assist countries in transitioning to net-zero emissions like clean power research and infrastructure, hydrogen fuel research and near-zero emission steel production.

On 2 November 2021, Prime Minister Johnson delivered a speech at the opening of the COP26 summit highlighting the importance of ODA in the world's phasing out of unabated coal power generation.²²³⁶

On 2 November 2021, along with France, Germany, the US and the EU, the UK announced the Just Energy Transition Partnership to support South Africa's decarbonization efforts.²²³⁷ This multilateral agreement will accelerate South Africa's transition to a cleaner, low-carbon economy with a particular focus on upgrading its electricity system. The UK will provide up to an initial combined commitment of USD8.5 billion.

On 3 November 2021, Chancellor of the Exchequer Rishi Sunak delivered a speech on how the UK plans to become the world's first net-zero aligned financial centre and welcomes commitments from private companies covering USD130 trillion of financial assets.²²³⁸ Chancellor Sunak highlighted how these commitments can be used to fund the UK's net-zero transition. Furthermore, Chancellor Sunak called upon other developed countries to boost their support of developing countries in their efforts to phase out coal.

On 4 November 2021, along with a 190-strong coalition of countries and organizations, the UK signed the Global Coal to Clean Power Transition Statement.²²³⁹ This multilateral agreement recognizes the need to

²²³⁹ Global Coal to Clean Power Transition Statement, UN Climate Change Conference UK 2021 (Glasgow) 4 November 2021. Access Date: 7 December 2021. <https://ukcop26.org/global-coal-to-clean-power-transition-statement/>

transition away from unabated coal power generation and commits the signatories towards working together on clean technologies research, financial support and ending new direct government support for unabated coal-fired power generation.

On 15 November 2021, International Trade Secretary Anne-Marie Trevelyan announced more than GBP217 million in support for the largest solar facility in Turkey.²²⁴⁰ This investment will support Turkey's clean energy goals in transitioning away from coal power generation.

On 24 November 2021, Secretary Kwarteng and Minister of Energy, Clean Growth and Climate Change Greg Hands announced an investment of GBP20 million per year in Tidal Stream electricity.²²⁴¹ This investment aims to develop marine energy technology, lower its costs of production and reduce domestic reliance on coal.

On 8 December 2021, Representative of British Office Taipei John Dennis reiterated the UK's commitment to working closely with partners like Taiwan in their transition toward renewable energy, particularly offshore wind.²²⁴² The goal of this statement was to showcase national expertise in the offshore wind industry.

On 9 December 2021, the UK announced an increase in the UK Export Finance cover limit for Ukraine²²⁴³ to GBP3.5 billion. The goal of this action is to enable support for priority projects in various sectors like clean energy.

On 13 December 2021, the Department for Business, Energy and Industrial Strategy launched the fourth round of applications for the Contracts for Difference scheme.²²⁴⁴ This scheme makes GBP285 million of annual funding available for green energy projects to help accelerate the UK's transition from coal energy.

On 17 December 2021, the United Kingdom Atomic Energy Authority signed two framework agreements for a total of GBP7.5 million to aid in the development of safe, efficient and low-carbon fusion energy.²²⁴⁵

On 6 January 2022, the UK's Ambassador to Turkey Dominick Chilcott announced the funding of six low-carbon Turkish projects through the Climate Finance Accelerator program.²²⁴⁶ The funding will support the project Smart Solar Technologies by expanding the production capabilities of solar modules.

On 26 January 2022, the Coal Authority tentatively approved a full underground licence for the Aberpergwm colliery to mine 40 million tonnes of high-grade anthracite coal.²²⁴⁷ However, the Government of Wales has noted that “[they] do not support the extraction of fossil fuels and are focused on the climate emergency.”

On 27 January 2022, Secretary Kwarteng announced a GBP100 million fund to support the development of the Sizewell C project, which is a new nuclear power station.²²⁴⁸ This investment aims to ensure less reliance on coal-fired power generation.

On 9 February 2022, Secretary Kwarteng announced that the Contracts for Difference Scheme will be auctioned every year rather than every two years.²²⁴⁹ The aim of this action is to ensure that renewable energy contracts are made available more regularly and to reduce the cost of clean technology.

On 16 February 2022, the Government Actuary's Department announced that it is working to reduce the carbon footprints of schools in England.²²⁵⁰ They plan on identifying ways on how and which traditional fossil fuel-powered boilers in schools can be replaced by low-carbon heat pumps.

On 6 April 2022, Foreign Secretary Elizabeth Truss announced that the UK will end its dependency on Russian coal by the end of 2022.²²⁵¹

On 13 May 2022, Secretary Kwarteng introduced the GBP120 million Future Nuclear Enabling Fund that is designed to promote new nuclear technologies in the clean energy market and approve eight new reactors by 2030.²²⁵² The goal of this fund is to financially support the clean energy market and divest from the coal industry.

On 24 May 2022, the Environment Agency issued fines for over 30 companies which had violated climate change schemes like reducing energy use and submitting necessary carbon dioxide emissions reports.²²⁵³ The goal of this action is to enforce the UK's target of net zero emissions by 2050.

On 26 May 2022, COP President Sharma, Minister Hands and Minister for the Pacific and International Environment Zac Goldsmith attended the G7 Climate, Energy and Environment Ministers Meeting in Berlin to discuss energy security.²²⁵⁴ The G7 ministers agreed to decarbonise power systems and they notably welcomed the Glasgow Climate Pact to work towards the eventual domestic phaseout of unabated coal power generation.²²⁵⁵

On 31 May 2022, Minister Hands announced over GBP31 million in funding to support domestic industries in the phasedown of dependence on fossil fuels and encourage the development of carbon capture technologies.²²⁵⁶

On 31 May 2022, the UK attended the sixth Ministerial on Climate Action (MoCA6) in Stockholm, Sweden.²²⁵⁷ Held at the halfway point between COP26 and the upcoming COP27, the MoCA6 sought to encourage members to deliver on their increased greenhouse gas emissions targets (or Nationally Determined Contributions) as well as promote climate financing of developing countries.

The United Kingdom has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021. The United Kingdom demonstrated strong actions within the ODA and investment pillars of cooperation. Not only did the United Kingdom emphasize the need for international investments in renewable power to phase out coal with the OECD and COP26 agreements but they also introduced domestic investments. Regarding trade promotion support, the United Kingdom provided funding to renewable electricity producers and to the steelmaking industry to move towards less polluting production methods. However, the January 2022 approval of a license for the Aberpergwm colliery to mine 40 million tonnes of anthracite coal is in opposition to the G7 pledge to not fund coal.

Thus, the United Kingdom receives a score of +1.

Analyst: Daryll Bien Concepcion

United States: +1

The United States has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021.

On 26 July 2021, the Environmental Protection Agency (EPA) announced its intent to strengthen the legal limits on water waste pollution from coal plants that use steam to generate electricity.²²⁵⁸ EPA Administrator Michael Regan stated that more stringent regulations are reasonable due to the advancement of carbon capture technologies, such as membranes. The goal of these regulations is to compel coal plants to utilize carbon capture technologies and to protect water resources from coal pollution.

On 31 August 2021, the US and Japan reaffirmed their partnership and dedication to take strong climate action over the next decade.²²⁵⁹ The two countries stated their intent to cooperate and innovate in areas such as carbon capture, renewable energy and industrial decarbonisation. Through the partnership, the two countries agreed “to end new direct government support for unabated international coal-fired power generation by the end of 2021 ... and work together to design pathways towards a net zero emissions future with developing countries.”

²²⁵⁹ U.S.-Japan Joint Statement, United States Department of State (Washington D.C.) 31 August 2021. Access Date: 9 January 2022. <https://www.state.gov/u-s-japan-joint-statement/>

On 6 October 2021, the Department of Energy invested USD45 million in 12 research projects focused on developing carbon capture and storage technologies.²²⁶⁰ Funding these research projects is an important part of the Biden-Harris administration's goal of reaching net zero carbon emissions by 2050.

On 22 October 2021, the US joined the Organisation for Economic Co-operation and Development (OECD)'s agreement to end export credit support for unabated coal-fired power.²²⁶¹ The goal of this OECD agreement is to discourage the construction of new coal-fired power plants that operate without operational carbon capture, utilization, and storage (CCUS) facilities.

On 2 November 2021, along with France, Germany, the EU and the UK, the US announced a pledge to provide South Africa with USD8.5 billion to accelerate its transition from coal to clean energy.²²⁶² The goal of this measure is to invest in capacities for developing countries to produce cleaner energy.

On 4 November 2021, the US refrained from signing the Global Coal to Clean Power Transition Statement at the 26th Conference of the Parties to the United Nations Framework Convention on Climate Change (COP26).²²⁶³ The UK-led statement was signed by representatives of over 40 countries and it included commitments to rapidly develop technologies that would replace unabated coal capacities, to stop issuing permits for unabated coal projects and to provide social, financial, and technical support to communities and industries affected by the transition.

On 4 November 2021, President Biden announced the launch of the First Movers Coalition at COP26.²²⁶⁴ Special Presidential Envoy for Climate John Kerry stated that "the First Movers Coalition is a platform for the world's leading global companies to make purchasing commitments to create early markets for critical technologies needed to achieve net-zero by 2050." The goal of the coalition is to be a "platform for companies to harness their purchasing power and supply chains to create early markets for innovative clean energy technologies that are key for tackling the climate crisis."

On 9 November 2021, Special Presidential Envoy for Climate Kerry stated that the US would stop using coal by 2030.²²⁶⁵ This development will be driven by market forces and the affordability of renewable energy sources caused by President Biden's climate policies and his plan to eliminate carbon emissions by 2035.

On 10 November 2021, the US and China announced the US-China Joint Glasgow Declaration on Enhancing Climate Action in the 2020s at the COP26 Summit.²²⁶⁶ The declaration affirms the two countries' commitment to increase their climate cooperation over the next decade and eliminate support for "unabated international thermal coal generation."

On 19 November 2021, the House of Representatives passed the Build Back Better Act.²²⁶⁷ On 28 October 2021, President Joe Biden had announced a framework for this act which aims to build a clean energy economy and decrease greenhouse gas pollution by over one gigaton by 2030.²²⁶⁸ It provides USD570 billion in funding for clean energy investments and tax credits that will encourage the utilization of clean energy technologies such as solar panels and electric vehicles.²²⁶⁹ The goal of this funding is to help the US transition away from fossil fuels, especially coal.²²⁷⁰

On 10 December 2021, President Biden ordered government agencies to stop funding new carbon-intensive projects abroad.²²⁷¹ He urged the agencies to instead support global projects that involve the advancement and adoption of clean energy technologies.

On 7 February 2022, Secretary of State Antony Blinken and Secretary of Energy Jennifer Granholm met with Vice President of the European Commission Josep Borrell Fontelles and European Energy Commissioner Kadri Simson in Washington D.C. for the ninth US-EU Energy Council.²²⁷² The Council emphasised the need to phase out unabated coal power capacities and support the decarbonisation in the Western Balkans.

On 8 March 2022, President Biden signed an executive order banning the import of Russian crude oil, liquefied natural gas and coal.²²⁷³ In order to decrease global dependency on Russian energy sources, the Biden administration stated that it is taking measures to augment its supply of fossil fuels in the short term while also accelerating its transition to a clean energy economy.

On 10 March 2022, EPA Administrator Regan stated that the Biden administration would continue to pressure power plants to cut pollution in accordance with the Clean Air Act.²²⁷⁴ This statement was in response to the Supreme Court's skepticism of the EPA's authority to regulate emissions from coal and gas power plants.²²⁷⁵

On 23 May 2022, the US and Japan reiterated their cooperation towards ensuring no new direct government support for unabated international coal-fired power generation as part of the US-Japan Climate Partnership.²²⁷⁶

On 26 May 2022, Special Presidential Envoy for Climate Kerry, EPA Administrator Regan and Deputy Secretary of Energy David M. Turk attended the G7 Climate, Energy and Environment Ministers Meeting in Berlin to discuss energy security.²²⁷⁷ The G7 ministers agreed to decarbonise power systems and they notably welcomed the Glasgow Climate Pact to work towards the eventual domestic phaseout of unabated coal power generation.²²⁷⁸

On 31 May 2022, the US attended the sixth Ministerial on Climate Action (MoCA6) in Stockholm, Sweden.²²⁷⁹ Held at the halfway point between COP26 and the upcoming COP27, the MoCA6 sought to encourage members to deliver on their increased greenhouse gas emissions targets (or Nationally Determined Contributions) as well as promote climate financing of developing countries.

The United States has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021. The United States has taken strong action in all the four pillars of cooperation by promising official development assistance to South Africa, signing international agreements for ending export credit for unabated coal-fired power plants, investing in decarbonising innovation like CCUS and creating a coalition to build early markets for testing clean energy technologies. While the United States plans to increase its use of fossil fuels due to the energy crisis caused by Russia's invasion of Ukraine, it is a short-term solution. In the long term, the United States plans to continue the development of a clean energy economy that does not rely on the use of unabated coal.

Thus, the United States receives a score of +1.

Analyst: Elisabeth Iannucci

European Union: +1

The European Union has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021.

On 24 September 2021, the European Commission announced two Energy Compacts designed to mobilize investments necessary to accelerate the clean energy transition globally at the United Nations High-Level Dialogue on Energy.²²⁸⁰ The first Energy Compact establishes a joint project with the International Energy Agency (IEA) to prepare zero emission energy “roadmaps” for coal-reliant economies where the European Commission will prioritise creating inclusive pathways for decarbonization to ensure a just and socially fair transition to clean energy. The second Energy Compact establishes a joint project with the International Renewable Energy Agency to prepare Regional Energy Transition Outlooks for Africa, Latin America, the Caribbean and Europe. The goal of these measures is to utilise international channels in ending investments in unabated coal capacities.

²²⁸⁰ Energy Transition: Commission Announces Three Energy Compacts at UN High-Level Dialogue in New York, European Commission (Brussels) 24 September 2021. Access Date: 9 December 2021. https://ec.europa.eu/commission/presscorner/detail/en/ip_21_4877

On 27 September 2021, the European Commission endorsed Romania's recovery and resilience plan.²²⁸¹ The plan devotes 41 per cent of funds accessed through the Recovery and Resilience Facility towards measures supporting a green transition, including phasing out coal by 2032 and investing in lignite power production.

On 5 October 2021, the Economic and Financial Affairs Council of the European Union (ECOFIN) adopted a set of conclusions regarding climate finance.²²⁸² The goal of these conclusions was to highlight the importance of phasing out fossil fuel subsidies and shifting financial flows towards sustainable investments.

On 22 October 2021, the EU agreed to end export credit support and tied aid for unabated coal-fired power plants at the Organisation of Economic Co-operation and Development (OECD).²²⁸³ This ban applies to new coal-fired power plants without carbon capture, utilization, and storage facilities and existing coal-fired power plants, unless the aid helps to supply or retrofit equipment related to pollution or carbon dioxide abatement.

On 27 October 2021, the European Investment Bank (EIB) announced its support for the United Nations Development Programme's "Don't Choose Extinction" campaign, which endorses the need for urgent fossil fuel subsidy reform.²²⁸⁴ EIB President Werner Hoyer reaffirmed their 2019 commitment to refuse financing for energy projects reliant on unabated fossil fuels.

On 2 November 2021, along with the UK, the US, France and Germany, the EU launched a partnership with South Africa to support the country's energy transition away from coal at the 26th Conference of the Parties to the United Nations Framework Convention on Climate Change (COP26).²²⁸⁵ The partnership committed to mobilize USD8.5 billion to support decarbonization efforts through concessional financing, grants, investments and risk-sharing instruments. The EU will direct funds towards social infrastructure to support workers affected by the coal phase-out and stimulate technological innovations such as green hydrogen.

On 21 December 2021, the College of Commissioners endorsed a new framework on state aid for climate, environmental protection and energy which included a new section of guidelines regarding state aid for the closure of coal plants.²²⁸⁶ This section proposes that member states with "very low" income per capita may use government funds to combine the phase out of coal with a simultaneous investment in transitional fuels such as natural gas.

On 7 February 2022, Vice President of the European Commission Josep Borrell Fontelles and European Energy Commissioner Kadri Simson met with US Secretary of State Antony Blinken and US Secretary of Energy Jennifer Granholm in Washington D.C. for the ninth US-EU Energy Council.²²⁸⁷ The Council reaffirmed the need to phase out unabated coal power capacities, in particular supporting the decarbonisation in the Western Balkans.

On 25 February 2022, the European Commission announced a EUR3.2 billion investment package for supporting 21 sustainability projects in the Western Balkans.²²⁸⁸ This package includes funding for the construction of solar power plants and the Trans-Balkan Electricity Corridor, which is identified as an essential infrastructure project for successfully phasing-out coal usage in the region.

On 11 March 2022, President of the European Commission Ursula von der Leyen proposed a plan to phase out Russian oil, gas and coal imports by 2027 at the informal summit of EU leaders in Versailles.²²⁸⁹ Under this plan, the EU would diversify its energy supplies through the use of natural gas and investments in building renewable energy capacity.

On 5 April 2022, the European Commission launched six “coal region exchanges” between Western Balkan and EU region partners including the World Bank, the European Investment Bank and the European Bank for Reconstruction and Development.²²⁹⁰ The goal of these regional exchanges is to engage in one-to-one dialogue and receive feedback from programme experts regarding best practices to accelerate the coal phase-out.

On 8 April 2022, the EU announced a new round of sanctions against Russia which included a ban on the import of coal.²²⁹¹

On 12 May 2022, the EU and Japan reaffirmed their principles in climate change mitigation and adaptation as part of the EU-Japan Economic Partnership Agreement and Strategic Partnership Agreement.²²⁹² Specifically, they promised to continue cooperation in encouraging countries to align their targets with the Paris Agreement temperature goal of 1.5°C and to phase out unabated coal power.

On 18 May 2022, the European Commission introduced the REPowerEU Plan in response to the disruptions in the energy market caused by Russia’s invasion of Ukraine.²²⁹³ The plan aims to rapidly reduce the EU’s dependence on Russian fossil fuels and tackle the climate crisis by working with other international partners to diversify energy supplies.

On 26 May 2022, Executive Vice-President and Commissioner for European New Deal Frans Timmermans, European Energy Commissioner Simson and Commissioner for Environment, Oceans and Fisheries Virginijus Sinkevičius attended the G7 Climate, Energy and Environment Ministers Meeting in Berlin to discuss energy security.²²⁹⁴ The G7 ministers agreed to decarbonise power systems and they notably

welcomed the Glasgow Climate Pact to work towards the eventual domestic phaseout of unabated coal power generation.²²⁹⁵

On 3 June 2022, the European Commission introduced a new set of sanctions against Russia, including a complete import ban on all Russian seaborne crude oil and petroleum products which covers 90 per cent of current EU oil imports from Russia.²²⁹⁶

The European Union has fully complied with its commitment to end new direct government support for unabated international thermal coal power generation by the end of 2021. The European Union has demonstrated strong action by working with international organizations like the IEA for implementing zero-emission roadmaps for coal-reliant economies, the OECD for ending export credit for coal-fired power plants, the ECOFIN for promoting the production of renewable energy with ECOFIN and investing in decarbonisation efforts at the COP26 Summit.

Thus, the European Union receives a score of +1.
